

```
1: // $Id: roboclient.java,v 1.5 2012-05-29 20:56:50-07 - - $
2:
3: //
4: // Roboclient hostname port username delaysec cycles message message...
5: //
6: // The roboclient connects to hostname:port with the username.
7: // Then it writes messages given by the trailing words in args
8: // the number of cycles followed by a certain delay in seconds.
9: // Then it quits. Useful for testing the server.
10: //
